Version 7.3.00 Enhancements

Security Reports

Reports were added in order to be better able to assign security to users and review the permissions assigned to users and roles.

The following reports were added:

- A listing of security users.
- A listing of security roles.
- A listing of security resource tags.
- A listing of security users assigned to roles.
- A listing of security resources assigned to roles.

Bug Fixes

1. When adding users while using SQL Server, the (All) security group association was not being created. This has been fixed in 7.3.00c.
